ABSTRACT

Optically Detected Magnetic Resonance; Computational Predictions
and Experimental Results

Scott Leland Crossen
Department of Physics and Astronomy, BYU
Bachelor of Science

[The abstract is a summary of the thesis/dissertation with emphasis on the findings of the study.
The abstract must not exceed 350 words in length and fit on one page, single spaced.]

Keywords: [A comma-separated list of descriptive words for search purposes]

Contents

Table of Contents	iii
1 A Sample Chapter	1
1.1 A Fascinating Section	1
Appendix A Appendix Title	3

Chapter 1

A Sample Chapter

1.1 A Fascinating Section

For a short thesis, you can usually just type the whole body of the thesis here. For longer documents you might consider typing chapters in separate files and using the `\include` command. There is another example on the physics web page ([click here to go there](#)) that shows how to do this.

You can create your bibliography right in the main tex document. Here are references to a book (?), an article (?), and a web site (?). You can also use BibTeX to keep track of your references. The method for using BibTeX is shown in the other example on the physics web page.

Making an index is easy. Just use the `\index{Key}` command. You can include figures too (see Fig. 1.1). Usually you need both eps and pdf versions of each figure.

Figure 1.1 A mirror with a hole is used to extract high-order harmonics generated in counter-propagating laser beams.

Appendix A

Appendix Title

You can put supplementary content in an appendix.
